

**12 x 7 = 84**

Diagram illustrating the components of a multiplication equation:

- 12** is the **multiplicand**.
- 7** is the **multiplier**.
- 84** is the **product**.
- 12** and **7** are collectively the **factors**.

1. In the equation  $8 \times 13 = \underline{\hspace{2cm}}$ , 8 and 13 are  $\underline{\hspace{4cm}}$
2. The  $\underline{\hspace{2cm}}$  of  $6 \times 5$  is equal to  $\underline{\hspace{2cm}}$ .
3. In  $9 \times 7 = \underline{\hspace{2cm}}$ , the multiplicand is  $\underline{\hspace{2cm}}$ , the multiplier is  $\underline{\hspace{2cm}}$   
and the product is  $\underline{\hspace{2cm}}$ .
4. The expression  $(2 \times 6) \times 7$  is equal to  $2 \times (\underline{\hspace{1cm}} \times \underline{\hspace{1cm}})$
5. The expression  $4(5+3)$  is equal to  $(4 \times \underline{\hspace{1cm}}) + (4 \times \underline{\hspace{1cm}})$
